**MADE IN USA**

*A Material Difference in Rope Protection*

Sharp edges, abrasion, ice axe strikes, shock, and dirt all damage ropes and screws. Spiroll® Rope Protectors offer the easiest, most portable, and most effective solution for these challenges, getting you climbing sooner and safer.

### *How Spiroll Rope Protectors Benefit Climbers:*

- Fast application: simply wrap around rope and slide into position. 'Tying off' is seldom necessary.
- Protects non-moving ropes used in top rope anchors, caving, ascending, rappelling (without rope pull), rescue, ropes courses, and tactical applications.
- Protects ropes from damaging ice axe strikes (top-rope climber).
- Wraps around ice screws to keep both points and threads sharp.
- Bright orange is highly visible- helps avoid tripping over anchor lines.
- Environmentally friendly- won't damage rock surface and reduces duct tape 'cliff litter'.
- Can be stored on a coiled rope.  
Extends a rope's working life.
